Contents

Section 1: Sickle-Cell Disease and Malaria

A clue to why a deadly genetic disease persists in Africa involves mosquitoes and some interesting evolutionary dynamics.

- Sickle-Cell Disease: A Hereditary Blood Disorder
- Simulating Diseases in an African Village
- Moisture, Mosquitoes, and Malaria
- Fitness

Section 2: The Interplay of Evolutionary Forces

A combination of interacting factors determines how a gene in a population will evolve.

- Establishment of New Alleles
- Genetic Drift

Section 3: Making Predictions: Hardy and Weinberg

The Hardy-Weinberg equation lets you generate and test hypotheses about evolution.

- The Hardy-Weinberg Principle
- The Hardy-Weinberg Equation
- Hardy-Weinberg: A Null Model

Section 4: On Your Own

Open-ended simulations: a virtual evolution playground.
