

Upon completion of *Niche Wars (WB)*, students should be able to:

1. Define the term 'ecological niche'.
2. Compare and contrast fundamental and realized niches.
3. Explain the competitive exclusion principle in terms of ecological niches.
4. Compare and contrast the two scenarios you investigated under which species coexistence is impossible.
5. Describe the conditions under which multiple species can coexist in the same community, including conditions in which competition is present.
6. Explain the relationship between competition, the fundamental niche, and the realized niche using specific examples from the lab as well as hypothetical examples.
