

Photosynthesis Explored

Table of Contents

Part 1: Plants, Photosynthesis, and Energy

Plant cells use the energy from sunlight to make carbohydrates from carbon dioxide and water.

- Life Requires Mass and Energy
- Where Does Plant Mass Come From?
- The Overall Photosynthesis Reaction
- The Chloroplast
- Photosynthesis Overview
- Light-Dependent Reactions
- The Calvin Cycle
- The Flow of Energy During Photosynthesis
- Guide the Chloroplast Through Photosynthesis
- Respiration and the Big Picture
- Test Your Understanding
- Summary of Part 1

Part 2: Mechanism of Light-Dependent Reactions

The light-dependent reactions transfer energy from light to ATP and NADPH.

- Why Are Plants Green?
- Chlorophyll
- Photosystems Capture Light for Energy Storage
- Guide the Cell Through the Light-Dependent Reactions
- The Proton Gradient
- Herbicide
- Test Your Understanding
- Summary of Part 2

Part 3: Mechanism of the Calvin Cycle

The Calvin cycle uses ATP and NADPH from the light-dependent reactions to fix carbon and make G3P.

- Energy Powers the Calvin Cycle
- Phases of the Calvin Cycle
- Calvin Cycle Phase 1: Fixation
- Calvin Cycle Phase 2: Reduction
- Calvin Cycle Phase 3: Regeneration
- Counting Carbons in the Calvin Cycle
- Molecular Perturbations
- Test Your Understanding

- Summary of Part 3

Part 4: C₃, C₄, and CAM Photosynthesis

Some plants concentrate or sequester carbon dioxide to increase photosynthetic efficiency or reduce water loss.

- Photosynthesis in Different Climates
- Photorespiration
- C₃ Photosynthesis
- C₄ Photosynthesis
- CAM Photosynthesis
- Overview of the Three Types of Photosynthesis
- Test Your Understanding
- Summary of Part 4

Part 5: Quiz Questions

Quiz Questions

- Quiz Questions
- Feedback Survey
